

# Reproducible dynamic documents with Rmarkdown

---

Francisco Rodríguez-Sánchez

@frod\_san

<https://frodriguezsanchez.net>

A scary movie... with happy ending

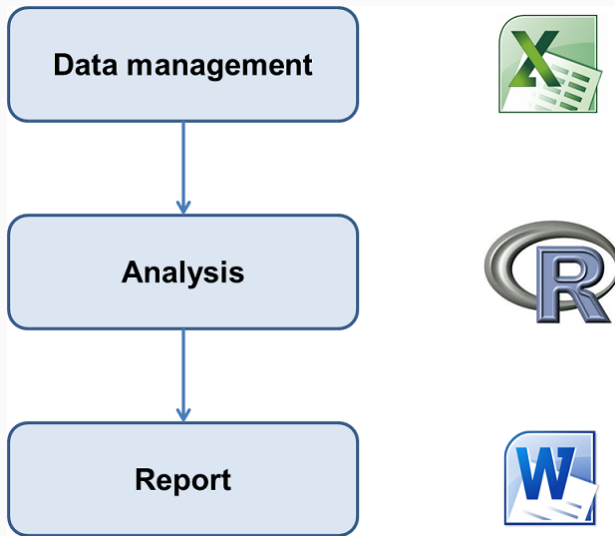

<https://youtu.be/s3JldKoA0zw>

## A typical research workflow

1. Prepare data (**s**preadsheet)
2. Analyse data (**R**)
3. Write report/paper (**W**ord)
4. Start the email attachments nightmare...

## This workflow is broken

- How did you do this? What analysis is behind this figure? Did you account for ...?

- How did you do this? What analysis is behind this figure? Did you account for ...?
- What dataset was used? Which individuals were left out? Where is the clean dataset?

- How did you do this? What analysis is behind this figure? Did you account for ...?
- What dataset was used? Which individuals were left out? Where is the clean dataset?
- Oops, there is an error in the data. Can you repeat the analysis? And update figures/tables in Word!

## Manual copy-paste is tedious & problematic

Coefficients:

	Estimate	Std. Error	t value	Pr(> t )
(Intercept)	-0.0651657	0.4264970	-0.153	0.879
sunshine	0.0100228	0.0004232	23.683	<2e-16

‘Transcribing numbers from stats software by hand was the largest source of errors’

(Eubank 2016)

**Trevor A. Branch**

@TrevorABranch

Follow

My rule of thumb: every analysis you do on a dataset will have to be redone 10–15 times before publication. Plan accordingly. [#Rstats](#)

Your **closest collaborator** is you 6 months ago,  
and you don't respond to emails.

(P. Wilson)

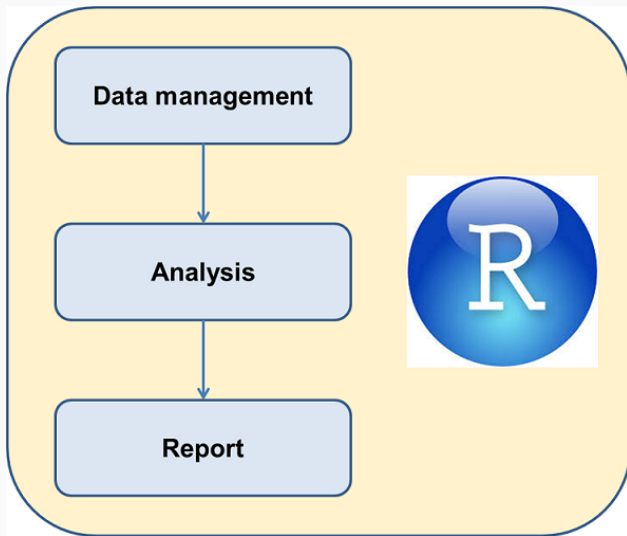

Even **you** will struggle to reproduce  
**your own results** from a few weeks/months ago.

Writing reproducible manuscripts is hard

Revising non-reproducible manuscripts is even harder

.

Also, please note that because rev#1  
asked to re-calculate effect sizes (...)   
we need to change every single  
number in the main text.

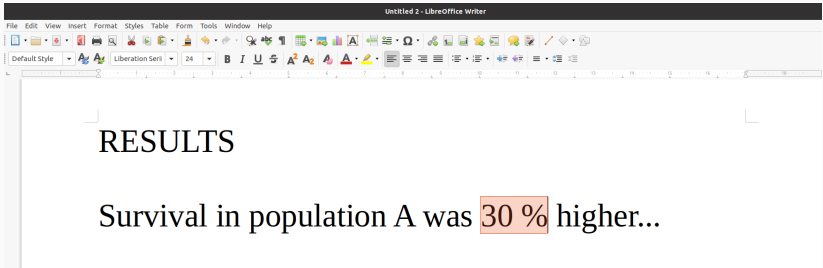

# Rmarkdown documents

- **Fully reproducible** (trace all results inc. tables and plots)
- **Dynamic** (regenerate with 1 click)
- **Multiple outputs:**
  - documents (HTML, Word, PDF)
  - presentations (HTML, PDF, PowerPoint)
  - books
  - websites...

# Where does this value come from?

*Rmarkdown:*

Survival in population A was ``r surv.diff`` % higher

*Output:*

Survival in population A was **30** % higher

## Dynamic documents with Rmarkdown

```
mydata <- read.csv("data.txt")
```

*Rmarkdown:*

We measured `nrow(mydata)` individuals

*Output:*

We measured **100** individuals

*Much better than copy-paste!*

# Introduction

Climate influences individual well-being [Rehdanz_2005].
However, ...

# Methods

```{r echo=FALSE}
# read data
data <- read.table("data.txt", header=T)
data[10,1] <- 11 # correct error

# fit linear model
model <- lm(happiness ~ sunshine, data=data)
```

We collected data on `r nrow(data)` individuals and fitted a
linear model.

# Results

We found that...

```{r echo=FALSE, results='asis'}
# make table with model output
print(xtable::xtable(model), comment = FALSE)
```

```{r echo=FALSE, fig.height=3, fig.width=3, fig.align='center'}
visreg::visreg(model) # plot
```

# Discussion

Our results confirm that happiness is related to
sunshine (slope = `r coef(model)[2]`).

# References
```

## Does sunshine make people happy?

### Introduction

Climate influences individual well-being (Rehdanz and Maddison 2005). However, ...

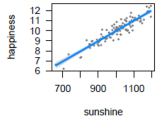

### Methods

We collected data on 100 individuals and fitted a linear model.

### Results

We found that...

|             | Estimate | Std. Error | t value | Pr(> t ) |
|-------------|----------|------------|---------|----------|
| (Intercept) | -0.0986  | 0.4271     | -0.23   | 0.8180   |
| sunshine    | 0.0101   | 0.0004     | 23.75   | 0.0000   |

The scatter plot shows a positive linear relationship between sunshine (x-axis, ranging from 700 to 1100) and happiness (y-axis, ranging from 6 to 12). A blue regression line is fitted to the data points, which are represented by small black dots.

### Discussion

Our results confirm that happiness is related to sunshine (slope = 0.0100652).

- Click **Knit** in Rstudio
- Report will **update automatically!**

# Why Rmarkdown?

  **Convince me to start using R Markdown**

**R Markdown** rmarkdown

 **Darren\_Dahly**

1. Start using R Markdown to generate reports of your data analyses.
2. If the data changes, rerun the report with a click of the mouse.
3. Take 3 days off of work.
4. On the 4th day, tell your collaborators that the re-analysis is complete.
5. Be hailed as a hero.

<https://rstudio.github.io/visual-markdown-editing>

## Automatic table generation

```
model <- lm(happiness ~ sunshine, data = mydata)
xtable(model)
```

|             | Estimate | Std. Error | t value | Pr(> t ) |
|-------------|----------|------------|---------|----------|
| (Intercept) | -0.0652  | 0.4265     | -0.15   | 0.8789   |
| sunshine    | 0.0100   | 0.0004     | 23.68   | 0.0000   |

Many alternatives: `gtsummary`, `modelsummary`, `huxtable`, etc

We fitted a linear model:

```
library('equatiomatic')  
model <- lm(happiness ~ sunshine, data = mydata)  
extract_eq(model)
```

$$\text{happiness} = \alpha + \beta_1(\text{sunshine}) + \epsilon \quad (1)$$

# Models that describe themselves!

```
library("report")  
model <- lm(happiness ~ sunshine, data = mydata)  
report(model)
```

We fitted a linear model (estimated using OLS) to predict happiness with sunshine (formula: `happiness ~ sunshine`). The model explains a statistically significant and substantial proportion of variance ( $R^2 = 0.85$ ,  $F(1, 98) = 560.90$ ,  $p < .001$ , adj.  $R^2 = 0.85$ ). The model's intercept, corresponding to sunshine = 0, is at -0.07 (95% CI [-0.91, 0.78],  $t(98) = -0.15$ ,  $p = 0.879$ ). Within this model:

- The effect of sunshine is statistically significant and positive ( $\beta = 0.01$ , 95% CI [9.18e-03, 0.01],  $t(98) = 23.68$ ,  $p < .001$ ; Std.  $\beta = 0.92$ , 95% CI [0.85, 1.00])

Standardized parameters were obtained by fitting the model on a standardized version of the dataset. 95%

Confidence Intervals (CIs) and p-values were computed using the Wald approximation.

Using LaTeX:

```
$$  
y \sim N(\mu, \sigma^2)  
$$
```

$$y \sim N(\mu, \sigma^2)$$

## My cool paper written in Rmarkdown

F. Rodriguez-Sanchez<sup>1,2</sup> and And Flander<sup>3</sup>

<sup>1</sup>Flow Institute of Technology, Department of Smart City, Smart City, Spain; <sup>2</sup>Teacher/University Department, Smart City, State City;

<sup>3</sup>This manuscript was completed on September 10, 2010.

Please provide an abstract of no more than 200 words in a single paragraph. Abstracts should explain to the general reader the major contributions of the article. References in the abstract must be cited in full within the abstract itself and cited in the text.

one | two | optional | optional | optional

This PNAS journal template is provided to help you write your work in the current journal format. Instructions for use are provided below.

Note: please start your introductions without including the word "Introduction" as a section heading (except for each article in the Physical Science section); this heading is implied in the first paragraph.

### Guide to using this template

Please note that while this template provides a preview of the typeset manuscript for information, to help in this preparation, it will not necessarily be the final publication layout. For more detailed information please see the PNAS Information for Authors.

**Author Affiliations.** Include department, institution, and complete address, with the ZIP/postal code, for each author. Use lower case letters to match authors with institutions, as shown in the example. Authors with an ORCID ID may supply this information at submission.

**Submitting Manuscripts.** All authors must submit their articles at PNAScentral. If you are using Overleaf to write your article, you can use the "Submit to PNAS" option in the top bar of the editor window.

**Format.** Many authors find it useful to organize their manuscripts with the following order of sections: Title, Author Affiliations, Keywords, Abstract, Significance Statement, Results, Discussion, Materials and Methods, Acknowledgments, and References. Other orders and headings are permitted.

**Manuscript Length.** PNAS generally uses a two-column format averaging 67 characters, including space, per line. The maximum length of a Direct Submission research article is six pages and a PNAS PLUS research article is ten pages including all text, space, and the number of characters displayed by figures, tables, and equations. When submitting tables, figures, and/or equations in addition to text, keep the text for your manuscript under 30,000 characters (including spaces) for Direct Submissions and 72,000 characters (including spaces) for PNAS PLUS.

**References.** References should be cited in numerical order as they appear in text; this will be done automatically via biblatex, e.g. (1) and (2, 3). All references, including for the SI, should be included in the main manuscript file. References appearing in both sections should not be duplicated. SI references

Fig. 1. Placeholder image of a frog with a large sample caption to show publication setting.

included in tables should be included with the main reference section.

**Data Archival.** PNAS must be able to archive the data essential to a published article. Where such archiving is not possible, deposition of data in public databases, such as GenBank, ArrayExpress, Protein Data Bank, UniProt, and others outlined in the Information for Authors, is acceptable.

**Language-Editing Services.** Prior to submission, authors who believe their manuscripts would benefit from professional editing are encouraged to use a language-editing service (see list at [www.pnas.org/authors/language-editing.cfm](http://www.pnas.org/authors/language-editing.cfm)). PNAS does not take responsibility for or endorse these services, and their use has no bearing on acceptance of a manuscript for publication.

### Significance Statement

Authors must submit a 120-word maximum statement about the significance of their research paper written at a level understandable to an undergraduate student interested outside their field of specialty. The primary goal of the Significance Statement is to explain the relevance of the work in broad context to a broad readership. The Significance Statement appears in the paper final and is required for all research papers.

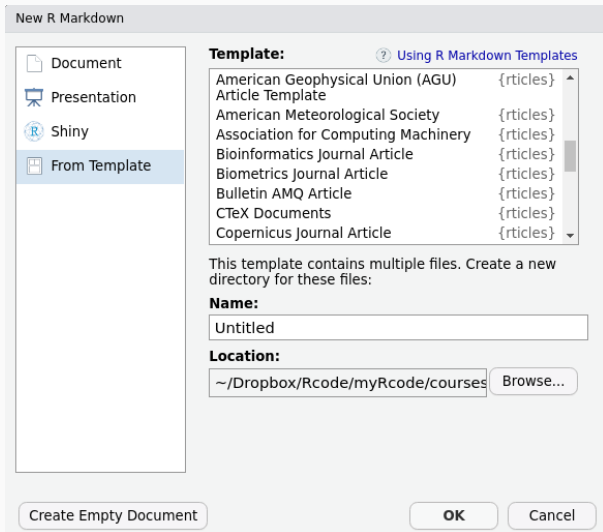

We provide details of author contributions here.

We use the following credit of research work.

[www.pnas.org/cgi/doi/10.1073/pnas.2020.000.000.000](http://www.pnas.org/cgi/doi/10.1073/pnas.2020.000.000.000)

PNAS | September 10, 2010 | vol. 87 | no. 36 | 1-2

## BOOKDOWN

### Write HTML, PDF, ePub, and Kindle books with R Markdown

The **bookdown** package is an [open-source R package](https://bookdown.org) that facilitates writing books and long-form articles/reports with R Markdown. Features include:

- Generate printer-ready books and ebooks from R Markdown documents.
- A markup language easier to learn than LaTeX, and to write elements such as section headers, lists, quotes, figures, tables, and citations.
- Multiple choices of output formats: PDF, LaTeX, HTML, EPUB, and Word.
- Possibility of including dynamic graphics and interactive applications (HTML widgets and Shiny apps).
- Support a wide range of languages: R, C/C++, Python, Fortran, Julia, Shell scripts, and SQL, etc.
- LaTeX equations, theorems, and proofs work for all output formats.
- Can be published to GitHub, bookdown.org, and any web servers.
- Integrated with the RStudio IDE.
- One-click publishing to <https://bookdown.org>.

## Rmarkdown resources

---

<http://rmarkdown.rstudio.com/>

The screenshot shows the R Markdown website homepage. At the top, the text "R Markdown" is displayed, followed by "from RStudio". To the right, there are navigation links: "Get Started", "Gallery", "Formats", "Articles", and a user icon. Below the navigation bar, there is a large blue banner with the text "Analyze. Share. Reproduce." and "Your data tells a story. Tell it with R Markdown. Turn your analyses into high quality documents, reports, presentations and dashboards." On the left side of the banner, there is a collage of images including a map of the United States, a scatter plot, and a line graph.

Contents:  
1. Markdown Syntax  
2. Knitr chunk options  
3. Pandoc options

| Syntax   | Becomes   |
|--|---|
| <p>Make a code chunk with three back ticks followed by an <code>r</code> in braces. End the chunk with three back ticks:</p> <pre>```r<br/>paste("Hello", "World!")<br/>```</pre>                      | <p>Make a code chunk with three back ticks followed by an <code>r</code> in braces. End the chunk with three back ticks:</p> <pre>paste("Hello", "World!")<br/><br/>## [1] "Hello World!"</pre> |
| <p>Place code inline with a single back tick. The first back tick must be followed by an <code>R</code>, like this: <code>r paste("Hello", "World!")</code>.</p>                                       | <p>Place code inline with a single back tick. The first back tick must be followed by an <code>R</code>, like this: <code>Hello World!</code>.</p>  |
| <p>Add chunk options within braces. For example, <code>echo=FALSE</code> will prevent source code from being displayed:</p> <pre>```r eval=TRUE, echo=FALSE<br/>paste("Hello", "World!")<br/>```</pre> | <p>Add chunk options within braces. For example, <code>echo=FALSE</code> will prevent source code from being displayed:</p> <pre>## [1] "Hello World!"</pre>                                    |

Learn more about chunk options at <http://yihui.name/knitr/options>

| Chunk options            |                          |   |
|--------------------------|--------------------------|---|
| option                   | default value            | description   |
| <b>Code execution</b>    |                          |   |
| <code>child</code>       | <code>NULL</code>        | A character vector of filenames. Knitr will knit the files and place them into the main document.   |
| <code>code</code>        | <code>NULL</code>        | Set to <code>R</code> code. Knitr will replace the code in the chunk with the code in the <code>code</code> option.   |
| <code>engine</code>      | <code>"r"</code>         | Knitr will evaluate the chunk in the named language, e.g. <code>engine = "python"</code> . Run <code>names(knitr::knit_engines\$get())</code> to see supported languages.   |
| <code>eval</code>        | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not run the code in the code chunk.  |
| <code>include</code>     | <code>TRUE</code>        | If <code>FALSE</code> , knitr will run the chunk but not include the chunk in the final document.   |
| <code>port</code>        | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not include the chunk when running <code>port()</code> to extract the source code.   |
| <b>Results</b>           |                          |   |
| <code>collapse</code>    | <code>FALSE</code>       | If <code>TRUE</code> , knitr will collapse all the source and output blocks created by the chunk into a single block.   |
| <code>echo</code>        | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not display the code in the code chunk above it's results in the final document.   |
| <code>results</code>     | <code>"markup"</code>    | If <code>"html"</code> , knitr will not display the code's results in the final document. If <code>"html"</code> , knitr will delay displaying of output pieces until the end of the chunk. If <code>"raw"</code> , knitr will pass through results without reformatting them (useful if results return raw HTML, etc.) |
| <code>error</code>       | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not display any error messages generated by the code.  |
| <code>message</code>     | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not display any messages generated by the code.  |
| <code>warning</code>     | <code>TRUE</code>        | If <code>FALSE</code> , knitr will not display any warning messages generated by the code.  |
| <b>Code formatting</b>   |                          |   |
| <code>background</code>  | <code>"#f7f7f7"</code>   | A background color for chunks in LaTeX output.  |
| <code>comment</code>     | <code>"#"</code>         | A character string. Knitr will append the string to the start of each line of results in the final document.  |
| <code>highlight</code>   | <code>TRUE</code>        | If <code>TRUE</code> , knitr will highlight the source code in the final output.  |
| <code>preempt</code>     | <code>FALSE</code>       | If <code>TRUE</code> , knitr will add <code>&gt;</code> to the start of each line of code displayed in the final document.  |
| <code>size</code>        | <code>"normalise"</code> | Fontsize for LaTeX output.  |
| <code>strip.white</code> | <code>TRUE</code>        | If <code>TRUE</code> , knitr will remove white spaces that appear at the beginning or end of a code chunk.  |
| <code>tidy</code>        | <code>FALSE</code>       | If <code>TRUE</code> , knitr will tidy code chunks for display with the <code>tidy_source()</code> function in the <code>formatt</code> package.  |

## R Markdown: The Definitive Guide

by Yihui Xie, J. J. Allaire, Garrett G. Rold

2018-09-11

Star

239

The first official book authored by the core R Markdown developers that provides a comprehensive and accurate reference to the R Markdown ecosystem. With R Markdown, you can easily create reproducible data analysis reports, presentations, dashboards, interactive applications, books, dissertations, websites, and journal articles, while enjoying the simplicity of Markdown and the great power of R and other languages. *Read more* →

# Welcome to Quarto

Quarto<sup>®</sup> is an open-source scientific and technical publishing system built on **Pandoc**

- Create dynamic content with **Python**, **R**, **Julia**, and **Observable**.
- Author documents as plain text markdown or **Jupyter** notebooks.
- Publish high-quality articles, reports, presentations, websites, blogs, and books in HTML, PDF, MS Word, ePub, and more.
- Author with scientific markdown, including equations, citations, crossrefs, figure panels, callouts, advanced layout, and more.

<https://quarto.org/>

Your turn

---

- Try visual markdown editor
- Add bibliography
- Try templates (articles, rmdTemplates)
- Parameterised reports (e.g. different iris or penguin species)
